**UNESCO Global Geoparks**

UNESCO Global Geoparks serve as outdoor museums on the geological resources of the area. They are special areas where the geology is of outstanding importance, which has been recognized by their states and nations and is presented in an appropriate manner. UNESCO Global Geoparks also offer education, both formal and informal, for the local community.

**Global Geoparks Network**

The Global Geoparks Network (GGN) is an international network of UNESCO Global Geoparks. It aims to promote the equitable geographical establishment, development and professional development of Global Geoparks, as well as to advance our knowledge about the Earth and its history. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Climate Change Understanding**

Climate Change Understanding involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Sustainable Tourism**

Sustainable Tourism involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Science & Research**

Science & Research involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Education for Sustainability**

Education for Sustainability involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Health & Wellbeing**

Health & Wellbeing involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Geological Hazards Risk Reduction**

Geological Hazards Risk Reduction involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Eco-Labelling**

Eco-Labelling involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Biodiversity Protection**

Biodiversity Protection involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Capacity Building Activities**

Capacity Building Activities involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Monitoring & Evaluation**

Monitoring & Evaluation involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Women Empower**

Women Empower involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Employment**

Employment involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Sustainable Development**

Sustainable Development involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Biodiversity & Heritage**

Biodiversity & Heritage involves the development of educational activities for the local people and visitors to the Global Geoparks. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Global Geoparks Network**

The Global Geoparks Network (GGN) is an international network of UNESCO Global Geoparks. It aims to promote the equitable geographical establishment, development and professional development of Global Geoparks, as well as to advance our knowledge about the Earth and its history. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**UNESCO Global Geoparks**

UNESCO Global Geoparks are areas that use the concept of UNESCO Global Geoparks to promote the equitable geographical establishment, development and professional development of Global Geoparks, as well as to advance our knowledge about the Earth and its history. The network also supports the development of sustainable tourism and the development of sustainable societies. It fosters the equitable geographical establishment, development and professional development of Global Geoparks.

**Global Geoparks Network**

The Global Geoparks Network (GGN) is an international network of UNESCO Global Geoparks.
